DETAILED ACTION

Claims 1-20 are pending.

1. The application contains claims directed to the following patentably distinct species. Applicant needs to elect a single species of hydrophilic polymer from group of compounds having ether bond and/ or an amide bond in main chain and a single species of hydrophilic polymer with atleast one polar group. The species are independent or distinct because as disclosed the different species have mutually exclusive characteristics for each identified species. In addition, these species are not obvious variants of each other based on the current record.
2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

3. The claims are deemed to correspond to the species listed above in the following manner:

Claims 1-20 are generic.

4. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Applicant needs to elect a single species of hydrophilic polymer that has an ether and/or amide bond in main chain e.g, polysaccharide, an alcoholic resin etc., similarly election of single species from hydrophilic polymer with at least one polar group on side chain e.g., polyether, polyvinyl alcohol. Election of single species of hydrophilic polymers having different structures as stated above is important as individual species lack the same or corresponding special technical features e.g. starch, cellulose etc that belong to polysaccharides are different compounds in nature from alcoholic resin, acrylic resin etc. Similarly, polyethylene glycol that belongs to polyether group has different properties from polyallylamine as described in specification.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
